Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement

Document D1 discloses (the references between parentheses refer to that document):

piston-type accumulator that comprises: an accumulator housing in the form of a cylindrical tube (1) made from magnetisable material, which defines an axial direction of the housing, a piston (6), which can be axially displaced over a stroke path in the cylindrical tube (1) and which forms a movable separating element which separates two working chambers (2, 7) within the accumulator housing, a magnet arrangement (11) which is disposed on the piston (6) and generates a field on the wall of the cylindrical tube (1), and a magnetic field sensor device which is located on the outside of the cylindrical tube (1) and comprises at least one Hall sensor (12) which is disposed on the outside of the cylindrical tube (1) and responds to the field generated by the magnet arrangement (11) on the piston (6) in order to determine the position of the piston (6) along the stroke path.

- 2.2. Document D2 (see, in particular, column 1, line 61 - column 3, line 6, figure 1) also discloses a device having the features of claim 1.

3 DEPENDENT CLAIMS 2-10

- 3.3.3. Regarding claim 6: see document D5, in particular column 4, lines 29-40, figure 1.
- 3.3.4. Regarding claim 7: dependent claim 7 concerns a minor structural modification to the device according to claim 6, of the kind that a person skilled in the art routinely makes on the basis of familiar considerations, especially since the resulting advantages are readily foreseeable.
- 3.4. Documents D3 to D5 describe the same advantages as the present application in relation to the features indicated in sections 3.3.1. to 3.3.4. A person skilled in the art would therefore regard
